Monitoring, Measurement, and Program Modifications

The Wastewater Division uses a number of criteria to monitor and measure the effectiveness of the daily operations of the collection system.

- The Division uses a Computerized Asset Management and Maintenance
 System that allows management to schedule maintenance activities based on
 our SSO Reduction Plan, CCTV data, and the information that is recorded by
 the maintenance crews
- The CCTV Inspection Program includes a quality assurance provision for maintenance activities
- The Division records and tracks the number of sanitary sewer overflows and monitors a number of criteria to determine success

The program is modified on an as-needed basis with the Collection System Manager the responsible individual.
