

## **Scheduled Inspections and Conditions Assessment**

### *CCTV Program*

The City of Pacifica Waste Water Division has scheduled to televise the entire collection system by 2012 and have televised approximately 53 miles so far. The CCTV inspection system contains an independent and uniform condition assessment rating program which is based upon the observations of the operators. Currently, the Waste Water Division has repaired a number of infiltration issues found in the implementation of the CCTV program. In-house staff and contractors have been used to either repair or rehabilitate leaking and broken sewers throughout this year. RMC has developed a Capacity Assurance and Master Plan and we have fully implemented a Computerized Asset Management and Maintenance System. Division staff continues to take a proactive approach, using the tools and funding available to us, to curb infiltration and inflow in the City of Pacifica's collection system.
